

Ball Mill

Ball Mill is an efficient tool for grinding many materials into fine power. The Ball Mill is used to grind many kinds of mine and other materials, or select the mine. The Ball Mill is the key equipment that repulverizes crushed materials. Ball Mill is widely used in manufacture industries, such as cement, silicate, new building materials, refractory materials, fertilizer, mill run of ferrous metal, nonferrous metal and glass ceramics and can be used for the dry and wet pulverization for all kinds of ores and other grindable materials. Dry pulverization is suitable for refractory materials, cement, fertilizer, glass industries; and wet pulverization is suitable for mill run, ceramics, and chemical industries.

Features:

Stable performance, wearable

Equal product size

Low invest, low energy consumption

Easy and safe operation
